

AuditScope Test Scope Report

SYNTHETIC AUDITSCOPE VERIFICATION FIXTURE - NOT A SECURITY AUDIT

Purpose: exercise AuditScope's production evidence pipeline on Base Sepolia. This document makes no security claims and contains no vulnerability assessment.

Fixture identity

Repository	https://github.com/amosjirau/auditscope
Exact commit SHA	740eebbb21af164209331eae15e8c9bc2a86ec86
Audited source file	fixtures/base-sepolia/contracts/VaultV1.sol
Contract in scope	VaultV1
Network	Base Sepolia (chain ID 84532)
Fixture date	2026-08-18

Scope boundary

Deployment addresses are reference fixtures only. Coverage is NOT limited to a particular deployment or address. Exact source correspondence to VaultV1.sol at the stated GitHub commit governs coverage.

In-scope source

The sole source file in scope is `fixtures/base-sepolia/contracts/VaultV1.sol` at commit `740eebbb21af164209331eae15e8c9bc2a86ec86`. No other Solidity file is in scope.

Controlled Base Sepolia deployments

These addresses are public test fixtures. CURRENT remains on VaultV1. STALE was initialized on VaultV1 and then upgraded to VaultV2. PARTIAL points to an intentionally unverified implementation. UNVERIFIED is a funded externally owned account with no contract bytecode.

Outcome	Address type	Base Sepolia address
CURRENT	Proxy	0xC7A79CD13dda7967588549a83110012Dcc395266
CURRENT	VaultV1 implementation	0x903C90A8879d54D719Fb1D0De22C105a2f380938
STALE	Upgraded proxy	0x0Bd5Dd0831139566Dc5166BA74F0891eb44A7b03
STALE	Initial VaultV1 implementation	0xD0267cb3Cb1F57b4471270304934C06C06F3ec0f
STALE	Live VaultV2 implementation (out of scope)	0x99a32A7715D49714D2aba8Ccc57a468B19Be258F
PARTIAL	Proxy	0x3E14Df03d2e3fEC961DAb781107D446c1AAC365E
PARTIAL	Unverified implementation (out of scope)	0x1584AE516269233af9A6dE1E17028D04B93CAE77
UNVERIFIED	EOA with no bytecode	0x76D753410be13BF383366a0F566f90c2d1819b67

Expected deterministic interpretation

CURRENT: the live implementation has Sourcify exact_match and its VaultV1.sol source equals the historical GitHub source. STALE: the live implementation has Sourcify exact_match but its source differs from the scoped VaultV1.sol. PARTIAL: the historical commit resolves but applicable live source evidence is incomplete. UNVERIFIED: the requested address has no contract bytecode.

END OF SYNTHETIC FIXTURE - THIS REPORT IS NOT A SECURITY AUDIT
